

ENERGY MANAGEMENT POLICY

The Energy management system applies to the activities of development, production and distribution of medicines, medical devices, cosmetics, food supplements, food for special medical purposes, and other support activities of JGL Group, i.e. of the companies:

- 1) JGL d.d., operating at Svilno 20, 51000 Rijeka
and Kukuljanovo 301, 51227 Kukuljanovo
- 2) Adrialab d.o.o., operating at Pulac 4A, 51000 Rijeka.

The main principles and goals of our Energy management system are:

- Permanent control over energy losses in development, production and distribution through the implementation of preventive methods for network maintenance and investments in the entire system;
- Ensuring the availability of information and data, continuous improvement of methods for the analysis of data on energy source consumption (electrical energy, water, fuel, gas), and recognising opportunities and implementing activities for improved energy performance;
- Continuously raising awareness on the importance of energy efficiency among all users;
- Procurement of energy-efficient machines, devices and vehicles, and energy services;
- Considering energy efficiency when designing, upgrading and modernising systems;
- Continuous improvements of the Energy management system in accordance with the requirements of the ISO 50001 standard;
- Continuous harmonisation and intention of exceeding legal and other requirements in the field of energy management, and in all other areas applicable to the business.

To achieve the above, the management define goals for the Energy management system and provide resources for their attainment. At the same time, participation in the Energy management system is a duty of all employees, who have a key role in carrying out the system activities.

Our Energy Management Policy is a public document, available to all employees, partners, and other interested parties.

Mislav Vučić
Chief Executive Officer, JGL d.d.
